About TT Tricks

TT Tricks is a modern serif font family whose design refers us to the style of transitional ser-ifs. The distinctive features of TT Tricks are the relatively low contrast of strokes, the slightly squarish shapes of round characters and the emphasized businesslike nature.
The original idea of TT Tricks is based on the graduation project of student Sofia Yasenkova, who chose to create a daily planner font as her final project. This led to many stylistic deci-sions, for example, the large and asymmetrical serifs, low contrast strokes, and the presence of interesting details.

Working on TT Tricks, we have significantly revised the initial idea and expanded the areas of possible font application, while maintaining the original spirit of the project. Despite the large number of display details, the typeface looks great in a small point size, and also when it is used in large text arrays.
Font features an original stylistic set which, when turned on, adds features of typical pointed-pen serifs to some of the lowercase characters. In addition, TT Tricks has small capitals for Latin and Cyrillic alphabets, as well as several interesting ligatures.

The TT Tricks font family consists of two font subfamilies, these are the main version and the version with the original stencil cutting. Each subfamily consists of 12 fonts: Light, Regular, DemiBold, Bold, ExtraBold, Black + True Italics. Following a good tradition, TT Tricks supports a large number of Open-Type features: ordn, case, c2sc, smcp, frac, sinf, sups, numr, dnom, onum, tnum, pnum, dlig, liga, calt, salt (ss01).
